Informatics graduate with strong analytical skills and a deep interest in human resource development. Experienced as a Full-Stack Developer in digitizing public services through web application development and data management systems. Solution-oriented, with a focus on innovative approaches to improve operational efficiency and work effectiveness through technology-based solutions.

EDUCATION

Universitas Islam Indonesia

Yogyakarta

Bachelor, Informatics

July 2020 - October 2024

GPA: 3.39 / 4.00

- Successfully completed a final project researching 'The Utilization of Social Media for Marketing'. The project successfully raised awareness among the community about the importance of digitalization and its potential benefits for business development

WORK EXPERIENCE

Deli Serdang Government Agency

Deli Serdang

IT Team / Full-Stack Developer | Contract Employee

December 2025 - Present

- Developed and maintained internal web-based systems to support the digitalization of government services in collaboration with cross-functional teams.
- Contributed to the successful implementation of internal applications, improving workflow efficiency, data accessibility, and system reliability.

PROJECTS

SIDISKO Application

- Developed and maintained an internal application designed to monitor IT team performance and efficiently manage departmental tasks.

JDIH (Legal Documentation and Information Network)

- Built and optimized a legal documentation web application using the Laravel framework, native PHP, and Tailwind CSS to create a responsive user interface.

MPP Queue System

- Designed a comprehensive queue management system for a public service center, including development of the queue display interface and integration of thermal ticket printing functionality.

MidnightStore (Web-Based Business Marketplace)

- Developed an end-to-end web-based marketplace platform using PHP, and MySQL, enabling users to buy and sell businesses through business listings with detailed statistics, advertisement tools, and a management information dashboard.

IoT-Based Smart Light Control System via Smartphone

- Designed and implemented an IoT-based smart lighting control system. The system utilizes a microcontroller module (e.g., ESP8266/ESP32) connected to a Wi-Fi network, with a mobile or web-based interface for control.

Android Ordering Application (PAB)

- Developed an Android-based ordering application using Kotlin and XML, enabling users to place orders and view transaction details through a user-friendly mobile interface.

Database Design Using ERD and SQL

- Designed and implemented a relational database system using ERD modeling and SQL (MySQL), including schema creation, data normalization, and writing SQL commands for data definition (DDL) and manipulation (DML). Tools used include dbdiagram.io, MySQL, and phpMyAdmin.

SKILLS

Soft Skill	Analytical Thinking, Problem Solving, Communication Skills, Teamwork
Hard Skill	SQL, Laravel, Tailwind CSS, PHP

COURSES

Data Analysis: Fullstack Intensive Bootcamp MySkill	Online June 2025 - July 2025
